Where to start with Policy / Political AI

Start with recurring work, a clear output and evidence that a reviewer can check.

pressure	start	output
A policy deadline and too much to read	A source-linked briefing	A concise briefing, source table and open questions.
Rules change and nobody knows what is affected	A policy change map	A comparison sheet showing affected claims and review needs.
Conflicting reports before the morning meeting	An attributed media brief	A 150-word dated brief and an evidence ledger.
Election coverage needs a defensible comparison	A media-monitoring analysis	A comparison ledger with evidence gaps and review questions.
Many consultation accounts, no clear next conversation	A mediation preparation tool	A focused agenda and a traceable record of open questions.
The same evidence is requested by different assessments	An evidence crosswalk	A completed illustrative meeting note, crosswalk and missing-evidence list.

Data structures define the terms. Capsules carry the context. Artifacts give the work a form.

Choose a task, inspect its evidence and review the output. The interactive assessment example is a fictional municipal service with fixed rules and original adopted-law references.

The structure behind the work

A source-linked briefing

Inputs: The policy question, source documents, audience and cutoff date.

Structure: Concepts, provisions, dates and source passages.

Capsule: ai-version-office-brief-1 / Artifact: ai-version-office-brief-4

Stage: method example

A policy change map

Inputs: Two identified source versions and the decisions or outputs that depend on them.

Structure: Versioned provisions and dependencies between evidence and conclusions.

Capsule: ai-version-office-brief-2 / Artifact: ai-version-office-brief-5

Stage: template requires current versions

An attributed media brief

Inputs: Reports, original-source links, the place and the reporting window.

Structure: Sources, claims, reporting origins, dates and measurement stages.

Capsule: gaza-daily-digest-1 / Artifact: gaza-daily-digest-4

Stage: historical worked example

A media-monitoring analysis

Inputs: The observation period, sampled outlets, coding rules and actual measurements.

Structure: Outlets, exposure units, tone codes, sampling limits and attributed findings.

Capsule: georgia-media-audit-1 / Artifact: georgia-media-audit-4

Stage: method requires measurements

A mediation preparation tool

Inputs: Consultation accounts, locality, attribution limits and the next meeting objective.

Structure: Positions, concerns, consent, mandates and missing perspectives.

Capsule: yemen-taiz-aden-wps-1 / Artifact: yemen-taiz-aden-wps-4

Stage: method requires case evidence

An evidence crosswalk

Inputs: A system description, existing assessment, impact evidence and responsible reviewers.

Structure: Evidence reuse, distinct assessment questions, source clauses and review roles.

Capsule: publicbody-fria-dpia-1 / Artifact: publicbody-fria-dpia-4

Stage: interactive illustrative example

Determinism means repeatable data and rule checks. It does not establish political truth or deterministic model generation. Historical examples, illustrative inputs and templates are labeled separately.
